INSTRUCTIONS FOR YOUR PET ANOLE

- 1 Make sure your animal has water. **Be sure to change the water every few days.**
- 2 Feed your pet 3-5 small LIVE crickets every day. **He will usually eat them right away (as long as he sees them). Make sure your pet has all of its food for the day and take out any leftovers from the day before.**
- 3 Mist your pet with water a few times a day. Check the humidity levels of your pet's cage.
- 4 Feed the crickets an orange cube and calcium quencher and cricket feed every few days. **Keep the orange cubes and calcium quencher in the refrigerator.**
- 5 Clean the waste out of his cage. You will need to change out the paper towels on the bottom of cage.

DO'S AND DON'TS

- 1 Hand washing is very important after handling any reptile.
- 2 **DO NOT** feed your pet insects that you have caught in your backyard.
- 3 Don't suddenly grab your pet or handle him by his tail or limb. Instead, hold your pet in your hand and support its tail with your arm.
- 4 Don't let your terrarium get direct sunlight from a window because the container may overheat due to the extreme heat from direct sunlight. Indirect sunlight will benefit your reptiles. Put the light bulb on top of the cage to provide a stable area for the lamp and prevent them from tipping over or falling.
- 5 Don't leave terrarium lights on at night. Turn the light off at night so they can sleep. Do not leave the "day light" on when you leave the house.
